

KF SynergyX Blaze HD²

SynergyX Alfalfa Blend

KingFisher SynergyX Blaze HD² is a blend of high-performing alfalfas focused on highest digestible quality and highest disease resistance. Blaze is naturally bred for reduced crosslinking with lignin and lower UNDF240 and Blaze maintains its forage quality across varying cutting systems. Increased persistence through synergistic tap and branch rooting systems as well as the strong disease resistance (APH2 resistant) of this blend brings incredible **stand health** and consistent quality. Blaze is selected for increased NDFD 30 and protein digestion to boost livestock performance, bringing greater profit potential to your farm.

The strength of our KingFisher SynergyX alfalfa blends is the power of synergy —mutually advantageous combined action. Instead of competing, the premium varieties in the SynergyX blends work together with their strengths **to produce yield and longevity above what each individual variety could do by itself.** They work together to fill out low, middle, and top canopy for a very dense stand. Their varying root systems feed the plants whether it's warm or cool, wet or dry.

Most fields have a variety of high and low spots as well as soil types. A single alfalfa variety may yield well in one spot of the field and not so well in another spot. But our KingFisher SynergyX alfalfas blend the strengths of several alfalfa varieties to increase the total field tonnage by bringing consistent yield to every square foot of the field.

Agronomic Traits

Disease Resistance	30-35
Dormancy	4.5
Winter Survival	2
Forage Quality	Excellent
Leaf to Stem	Excellent
Persistence	Excellent
Yield	Excellent

Planting Rates

- Plant with a drill or Brillion seeder into a firm seedbed; 18-22 lbs./A

Management

- Take a soil test; calcium, potassium, phosphorus, sulfur, boron and other nutrients are needed in the right amount for high alfalfa yields

Byron Seeds[™]

Fertile Fields. Higher Yields. Plan On It.
